DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 9-12, filed 8-21-07, with respect to the claims have been fully considered and are now persuasive for claims allowed below. The previous 35 USC 103 rejection and the obviousness double patenting rejection of the previous office action has been withdrawn.
2. This application includes the presence of claims 17-20 directed to invention non-elected without traverse. Accordingly, claims 17-20 been cancelled in the examiner's amendment below for allowance purposes.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Hanson on 9-21-07.

The application has been amended as follows:

In the title: shorten to read as follows:--Method for producing corrosion-resistant rare earth metal-based permanent magnet--.

In the claims: cancel claims 17-22.

Allowable Subject Matter

3. Claim 1-11, 13-16 are allowed.

Reasons for allowance

4. The following is an examiner's statement of reasons for allowance:

The present invention includes independent claims 1. Claim 1 recites a method for producing a corrosion-resistant a rare earth metal-based permanent magnet.

Japanese patent Publication '802 is considered the closest prior art. Japanese patent Publication '802 discloses a method for producing a corrosion-resistant rare earth metal-based permanent magnet, characterized in that it comprises providing an aqueous treating fluid.

Japanese patent Publication '802 does not disclose the claimed combination including:

In claim 1:

providing an aqueous treating fluid, which contains a hydrolysis polymerization product of alkyl silicate and fine zinc particles having an average particle diameter of 1 micrometer to 50 micrometer and has a pH value of 6 to 8 and a viscosity of 1000 cP or

less, applying the fluid on the surface of a rare earth metal-based permanent magnet, and subjecting the resultant magnet to a heat treatment at 250 °C to 400 °C, to thereby form a corrosion-resistant film containing fine zinc particles dispersed therein.

For these reasons claim 1 is deemed to be allowable over the prior art of record, and claims 2-11, 13-16 are allowable by dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
